Week 2 in Review

This week was a lot better for me than week 1. After I began to realize how this class was actually set up as a self guided, self motivated course. After reviewing this week's materials. I began to feel that this content should have been presented earlier within the course.

I started this week by creating my first SWOT. I was exempt for Psychology of Play from my prior course work from Georgia Perimeter College. I found it very interesting to review my strengths weaknesses opportunities and threats. I remember reviewing this information in my original psychology class but it was so long ago and I was on a different path of my life. I will attach my SWOT to my portfolio for review.

Research this week seemed to come a lot easier for me this week as well. I took a lot of consideration to determine what story to discuss for this week's failure to success story. I began to research stories like Jeff Bezos, the founder of Amazon, and creators of Facebook, but those stories didn't quite fit what I was going for. I finally decided to go with Kim Kardashian. I knew she would be a controversial topic for this week because she was already born into a life of privilege, but she also went through a bit of turmoil in her life that got her where she is today.

After reviewing the information on Portfolios and E-Portfolios, I began to reconsider what I want to include on my portfolio. Last week I began work on an application that would help a user determine what documents are needed to collect in preparation for filing taxes. I have decided to halt production on that application because it does not follow with the ideas that I have for myself in creating youthful web pages for modern clients. Instead I reviewed my previous works from my Scalable Data infrastructures course and include my Gift Analyzer application. I feel that this app shows my full range of understanding with C# as it contains many of the elements that I learned in SDI.
